

SOLIDSTART[™] DESIGN

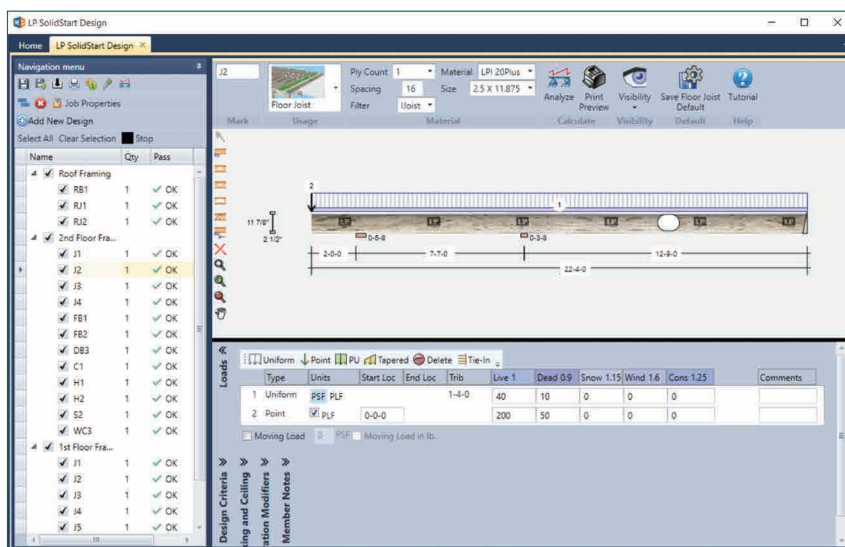

A Dynamic New Design Tool for Specifiers

LP[®] SolidStart[™] Design is feature-packed design software to help you specify the right products for floor, roof, and wall applications, *intuitively, quickly, effectively*.

Be productive right away.

With LP SolidStart Design you can:

- Start with a single click:
 - Change the depth or length of a member.
 - Add or change bearings.
 - Add or change holes in joists or beams.
- See all inputs on one screen—no switching between tabs.
- Specify Engineered Wood Products from your inventory list.
- Define a design for each application—floor joists, drop beams, columns, and more.
- Save your frequently used designs as defaults. The next time you start, everything is set for designing new members.
 - Spacing, spans, bearings, and even holes and notches can be saved.

- Easy to learn | Easy to use | Open a job and design—all on one screen.
- Fully interactive graphic interface—either adjust components on the live graphic or enter data in fields.
- Save design settings for future projects—no redundant data entry.
